## Viedoc 4.4

---

### Updated functionality and bug fixes

List of new functionality that has been updated in this release.

- Added language support (application systems texts in other languages than English – currently Swedish and Japanese have been implemented)
- Added time zone support (date/time stamps shown in local site time instead of UTC)
- Added the possibility to configure studies with conditional visits
- Added the possibility to configure studies with conditional items on a visit level
- Added the edit check overview
- Added a new export option: one-row-per-subject
- The item order in an export did not always match the item order in the forms. This has now been fixed.

## Viedoc 4.4

---

### Known limitations

List of limitations that have been found with this and earlier releases of Viedoc, and will be changed in future releases.

- Queries cannot be exported
- The export preview feature is heavy to load and might cause the application to feel unresponsive
- Only one (selected) language can be imported from each CDISC ODM file
- Only one (selected) design can be imported from each CDISC ODM file
- When a study is exported in CDISC ODM format a study id is generated and added to the file exported. If this file is then imported into another study then the study id is not reset, and appears to be the same for both studies. This study id is not used internally in Viedoc so this has no effect on Viedoc, but can be confusing if export files are reviewed manually.
- Derived variables that rely on more than one other variable are only re-evaluated when the first of those values is updated, and not when the other variables are updated.
